

INSTALLATION TIPS

- Be sure to mount the control box on a post or piling in a well-ventilated area, ideally 6 feet above the waterline, and within 10 feet of your outlet.
- You will need to plug the system directly into a grounded 110V outlet. Using an extension cord, splitter, or plug-in timer is NOT recommended.
- Attach the weight to your wire an inch or two beneath the bulb with the included heavy-duty zip ties. Ideal depth is 5 to 8 feet below the surface at low tide.
- Once your control box is mounted and the weight has been attached to the wire, carefully lower the light into the water at your desired location, ideally 10 feet off your dock. Do not throw, toss, or pitch the lights into the water as this can potentially break the bulb upon impact.
- Once your light has been deployed, connect the photocell to the control box and wait for the sun to set!

OPERATIONAL MAINTENANCE

Under most circumstances, our Underwater Fish Lights do not need regular maintenance, however there are a few things that will ensure the integrity of your system. We suggest running the lights for a minimum of 8 hours to prevent marine growth. Additionally, it's critical that the lights remain fully submerged at all times and are never illuminated outside of the water as this will irreparably damage the bulbs. Lastly, please note that our bulbs cannot be unscrewed or removed as they are permanently sealed to the housing which is sealed to the wire. If you have any questions, feel free to contact us at 941-391-5846 or info@fishlight.com.

SEASONAL RESIDENTS

If you are a seasonal resident heading back north, we strongly suggest that you unplug your system, pull the light(s) from the water, unmount the control box, and store your Underwater Fish Light until you return. Not only will this prolong the operating life of your bulb, it will ensure that your system is kept safe and secure while you're not there, especially during hurricane season.

BULB LIFE EXPECTANCY

**There are many environmental variables that will affect the lifespan of your bulb, so please understand that these times are approximate based on what we've measured over the years. Due to their colored filament, the Vibrant Green and Caribbean Blue bulbs have a significantly shorter lifespan and typically need to be replaced annually.*

SUGGESTED ACCESSORIES

WIRE SHIELD

It goes without saying that our lights are guaranteed to attract fish, however in some areas, you may also attract anglers that are drawn to the plethora of fish swimming around your light. Damage to the wire can occur from fish hooks, oyster beds, rocky or abrasive seabeds, and occasionally marine life, specifically parrotfish and sheepshead. Our Wire Shield conduit is the best way to protect your light assembly from nicks or cuts in the wire.

STARBOARD MOUNTING PLAQUE

If you want to give your installation a polished and professional look, we've got you covered! Not only will your setup look much neater with our mounting plaque, but it will also give the control box additional support when mounted to your post or piling. Composed of durable, weather resistant high-density polyethylene (HDPE), our control box mounting plaques can withstand every element of the marine environment, all the while keeping your system safe and secure. No need to worry about rotting wood or the plaque ever losing its integrity as these are meant to last for years to come, regardless of weather conditions.

www.fishlight.com

We know that you have many choices when it comes to underwater lighting and we truly thank you choosing Underwater Fish Light. Since 2008, we've been manufacturing the absolute BEST underwater lights on the market today using only the highest quality UL approved components. All of our systems are proudly built in the USA at our manufacturing facility in Port Charlotte, Florida.

Over the years, we have perfected our craft in order to create the most durable and longest lasting underwater lighting system. Our stellar reputation was earned through many years of customer feedback and industry-leading service and support.

Should you ever have any questions regarding your Underwater Fish Light, we have a full team that would be more than happy to assist you with any inquiries that you may have. Give us a call Monday through Friday at 941-391-5846 or email us at info@fishlight.com.

WARRANTY COVERAGE

All of our 175W and 250W Underwater Fish Light control boxes and internal components carry a three-year limited warranty which covers any level of manufacturer defect. Our 175W and 250W Natural Green bulbs carry a three-year limited warranty and our 250W Vibrant Green bulbs and Caribbean Blue bulbs carry a one-year limited warranty. Any warranty claims require that the component in question is sent to us for evaluation. The warranty does not cover damage, broken bulbs, acts of nature, theft, misuse, or any modifications to the system itself, including, but not limited to hardwiring, removal of the inline GFI plug, and the use of non-OEM components. Please note that replacement components do not extend or restart your warranty.

SAFETY DISCLAIMER

We take every precaution to ensure that we are offering a safe and reliable product. All of our Underwater Fish Light systems include an inline GFI plug that needs to be plugged into a grounded GFCI outlet at all times. Even with this protocol in place, we must insist that you do not swim around the lights when they are plugged in or while in operation. Although the system is designed to immediately shut down if there is any interruption of power, the possible risk of shock, injury, death is too great to take a chance. Please unplug the system from the outlet prior to entering the water. Underwater Fish Light, LLC is not responsible for any injury, death, or damage to property caused by the use or misuse of this product.
